

## New Grape Selections Available From FPS in the 2009-2010 Season

The following recently-released grape selections have been tested for disease and planted in the FPS Foundation Vineyard. The source vines of most of these selections are too young to produce hardwood cuttings for sale in the 2009-10 dormant season. To ensure that FPS customers are able to receive some propagating material of even the newest selections, customers may custom order mist-propagated plants (own-rooted green plants in 4" pots) of the selections included on this list. Limited numbers of dormant cuttings may be requested of the selections marked with an asterisk (\*) if requested by the **dormant cutting order deadline of November 15th**.

November 2009

MPPs are produced from young mother vines after they are ordered for delivery approximately 6-12 months later. Expected delivery dates depend on several factors, including time of year ordered, number of plants requested, number of other orders received for the same selection(s), and age and condition of source vine(s). MPPs may be requested at any time of year, but **to have the best chance of receiving at least some of your plants the following summer, it's best to place your order by November 15th**. Due to the limited supply of material to start MPPs, large orders can sometimes take up to two years to fill completely.

Selections marked "R" (Registered) are available as California Foundation stock, as the source vines have already been professionally identified. Selections marked "P" (Provisional) have not yet been checked for varietal correctness, and are sold strictly on an "as is" basis. Customers assume all risk associated with purchase of unidentified Provisional materials. When/if the Foundation Vineyard source vines for materials previously sold as Provisional are verified true to variety, California Foundation Stock numbers will be issued upon request from the customer.

Additional detailed information about these selections, including source information, disease elimination treatment status and relevant comments, as well as varietal information and descriptions, including synonym information, can be viewed on the National Grape Registry (NGR) Web site maintained by FPS at:
